PROFESSIONAL SUMMARY

SOC Analyst candidate (B.S. Computer Science & Information Security, Dec 2026) with hands-on experience triaging Splunk SIEM events across 15,000+ users, assessing controls against NIST CSF/800-53, and analyzing phishing threats. Runs a home SOC lab with an SSH honeypot, DNS sinkhole, and traffic monitoring; performs forensics and attack labs in sandboxed environments.

EDUCATION

CUNY John Jay College of Criminal Justice — New York, NY **Expected Dec 2026**
B.S. Computer Science & Information Security

- **Relevant Coursework:** Network Security & Forensics, Computer Security & Forensics, Cryptography & Cryptanalysis, Linux System Administration & Security, Computer Networking, Operating Systems, Cybersecurity Capstone I & II

CUNY LaGuardia Community College — Queens, NY | *A.S. Computer Science* · Dean's List **Jul 2024**

CERTIFICATIONS & TRAINING

Google Cybersecurity Professional Certificate — Google / Coursera Completed
Introduction to Cybersecurity — Cisco Networking Academy (verified badge) Sep 2026
In Progress: CompTIA Security+ · Cisco Ethical Hacker · TryHackMe SOC Level 1 Path 2026

TECHNICAL SKILLS

Security Operations: Splunk SIEM, log analysis, alert triage, phishing analysis, incident response, threat intel, vulnerability assessment
Network & Monitoring: TCP/IP, DNS, IPsec, firewalls, IDS/IPS, Wireshark, tcpdump, ntopng, Pi-hole, Grafana
Forensics: Autopsy, Eric Zimmerman tools (JumpList Explorer, ShellBags Explorer), Windows artifact analysis
Frameworks & GRC: NIST CSF, NIST SP 800-53, risk assessment, security controls testing, compliance reporting
Cloud, OS & Tools: AWS EC2, Azure, Linux (Ubuntu), Windows 10/11/Server, Docker, VMware, VirtualBox, Git, Azure DevOps
Scripting: Python, PowerShell, Bash, SQL

EXPERIENCE

Cybersecurity Analyst Intern — NYC Department of Social Services (DSS), New York, NY **Jun 2025 – Aug 2025**

- Monitored and triaged security events in Splunk SIEM, analyzing email logs and user activity across 15,000+ employees to detect threats and anomalous behavior.
- Conducted vulnerability assessments and security control checks aligned with NIST CSF and NIST SP 800-53; produced risk-ranked remediation reports.
- Performed phishing threat analysis and built incident response training modules to reduce human-factor risk.
- Built Splunk dashboards that translated raw log data into compliance and risk metrics; presented security findings to senior leadership.
- Tracked vulnerability remediation in Azure DevOps, coordinating cross-team tasks to close security gaps on schedule.
- Evaluated AnythingLLM for GRC compliance workflows, validating output accuracy and identifying automation use cases.

Student IT Technician — Norwich University ITS, Northfield, VT **Jan 2022 – May 2022**

- Reduced security incidents by 30% through proactive vulnerability scanning and threat mitigation across 500+ Windows/Linux endpoints.
- Managed user access controls, asset documentation, and system troubleshooting supporting IT security and compliance.

PROJECTS

Home SOC & Honeypot Lab | Raspberry Pi, Cowrie, Pi-hole, ntopng, Grafana, Ubuntu, VirtualBox Ongoing

- Deployed a Cowrie SSH honeypot to capture brute-force attempts, attacker credentials, and post-login commands for analysis.
- Run Pi-hole as a DNS sinkhole and ntopng for traffic monitoring, with honeypot and network telemetry visualized in Grafana.

Attack & Cryptography Labs (SEED Labs) | Cybersecurity Capstone II, Ubuntu VM, Docker Fall 2026

- Executing sandboxed attack labs: Set-UID escalation, Meltdown/Spectre, TLS/PKI, MD5 collision, hash length extension, Heartbleed.
- Team project reproducing Morris Worm propagation in Docker networks; present weekly analyses of real-world breaches.

Digital Forensics Investigations | Autopsy, JumpList Explorer, ShellBags Explorer 2026

- Reconstructed user activity from Windows Jump Lists and ShellBags; analyzed disk images in Autopsy to build timelines.

Cloud-Based Malware Scanner & Threat Intelligence Platform | Python, AWS EC2, ClamAV, VirusTotal API 2024

- Built an AWS EC2-hosted platform automating malware detection via ClamAV/VirusTotal, with Pandas/Matplotlib risk reports.
